

Gelation Procedure for CollOvine-RD (3 mg/mL)
Lot Number: 190919005FS010

Materials:

1. CollOvine-RD (3 mg/mL, Lot 190919005FS010)
2. 1 M TRIS Buffer, pH 8

Procedure:

1. To an appropriately sized container, transfer the amount of CollOvine-RD needed.
2. Add 80 μ L of 1 M TRIS Buffer to every 1 mL of CollOvine-RD.
3. Mix the solution **thoroughly**, but gently to avoid bubbles. Do not vortex.
4. If needed, aliquot the mixture into desired container(s).
5. Incubate the neutralized mixture at 37°C to initiate gelation. Allow the gel to form for at least 3 hours. Avoid moving the mixture during the incubation time.
